DETAILED ACTION

Continuation Application

Examiner acknowledges the instant application as a continuation of application 09/790,231. Applicant should amend the specification to indicate the application's status as a continuation of 09/790,231.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 78-132 are rejected under 35 U.S.C. 102(e) as being anticipated by Acres '483. Acres teaches a gaming system that has a display, an input device, a currency accepting mechanism and a controller (Fig. 2) to generate various video games (1:1-3:20). The game machines can be used in a standalone configuration or network configuration (5:47-6:12), which teaches of an internal or external clock/time generator and reconfigures various game parameters based upon a time signal (6:55-62). Various game parameters examples that are changed are rate of game play (6:44), wagering level (6:45), sound level (3:17-20), appearance (3:17-20), a bonus

game (8:20-48), payback percentage (8:4), and maintenance is viewed as any period of time where game parameters are changed. Acres also clearly states the scope of the invention is to change such game machine aspects/behaviors with respect to time (3:18) in addition to other such variables. Acres offers additional evidence to premise the invention in the abstract by teaching machine behaviors such as game speed, payback percentage, game appearance are changed in response to a signal from one of a number of variables, such as time (Abstract). Acres furthermore offers more support for the behaviors such as payback percentage modified based upon time (8:49-65).

In regard to memory mediums used, Acres teaches using optical (4:3), and various semiconductor memories such as PROMs (5:21) and RAM (5:25) to store various instructions to implement and execute the above-taught game system.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Aaron L Enatsky whose telephone number is 703-305-3525. The examiner can normally be reached on 8-6 M-Th.
